# How to use the Wordpress Plugin

## *1a) Installation*

1. Login into Wordpress as admin and go to the plugins screen and select the "Add New" sub menu.

2. Click on "Upload" and select the downloaded zip archive.

## *1b) Alternative Installation over FTP*

1. Extract the downloaded zip archive.

2. Upload the `secsign` folder with your FTP program to the `wp-content/plugins` folder in your WordPress directory.
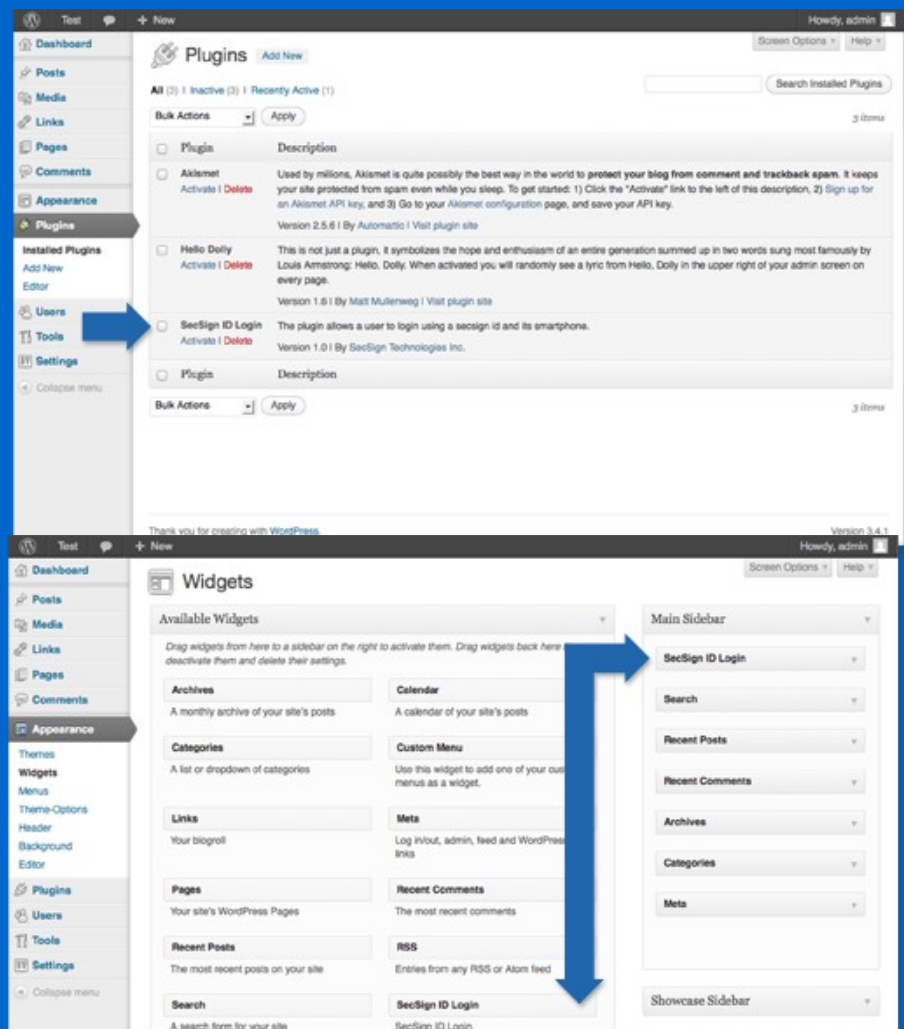

## *2) Activation*

1. Login into Wordpress as admin and go to the plugins screen to find the "SecSign ID" plugin in the list.

2. Click "Activate" plugin

3. Go to „Appearance" screen and click the „Widgets" submenu.

4. Drag and drop the "SecSign ID" widget to the "Main Sidebar"

## 3) Admin Configuration

1. Go to the „Settings" screen and select the "SecSign ID" submenu.

2. Change the service address which will be shown to the user in the smartphone app. This should match the URL the user sees, when he visits your site. Optionally, assign SecSign IDs to Wordpress users.

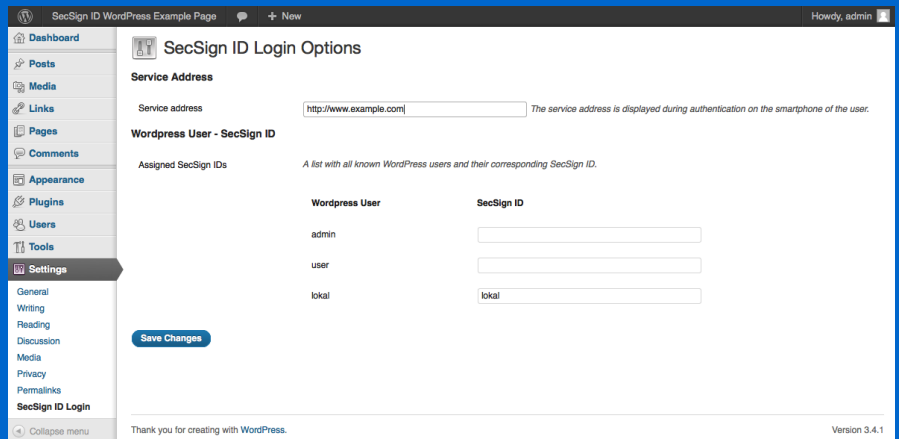

## 4) User Configuration

1. Login into Wordpress as user and go to your profile page

2. Assign a SecSign ID to your profile to allow SecSign ID authentication.

3. You can also just sign in with your SecSign ID. You will then be shown a dialog, where you can create a new user or assign your SecSign ID to an existing wordpress user.
